

Join us in building India's Apex body in safer mobility

Thank you for applying to Crashfree India Internship Program. As we dive into the **second round of assessment we seek for clarity, structure and relevance to the submissions made to the respective vertical on ensuring the focus on road-safety**. This submission round will serve as a testament to the applicant's significance for the aspired role based on relevant skillsets.

All submissions will remain the intellectual property of the applicant. Crashfree India (CFI) may use the submitted work only with the applicant's prior approval.

This is your chance to demonstrate creative thinking and a structured approach. A well-crafted, authentic submission not only reflects your capabilities but can also open meaningful opportunities ahead.

Location: **In-office (Gurugram)** | Duration: **3-6 months**

Start Date: **Immediate** | Stipend: **Competitive, as per market standards** | Perks: **LOR, mentorship, and a chance to join the CFI core team**

Profile: Data Analyst Intern

Assignment Description: Our mission is zero road fatalities in India by 2040, and every piece of work done at Crashfree India must contribute meaningfully toward that goal. This assignment asks you to do exactly that: use the power of data to surface the systemic failures that Parliament has been flagging for a decade, and translate that evidence into actionable recommendations for traffic police across India.

Task: Compile, clean, and analyze quantitative data from parliamentary questions raised in Lok Sabha and Rajya Sabha over the last 10 years (2015–2025) on road safety, traffic enforcement, and crash-related topics. Based on your analysis, derive five sharp, evidence-backed recommendations for traffic police that align with Crashfree India's systems-thinking approach, moving from reactive penalty-based enforcement to preventive, measurable, scalable safety systems.

Part 1: Data Compilation

Access parliamentary questions from sansad.in, loksabha.nic.in, and rajyasabha.nic.in. Focus on Starred, Unstarred, and Short Notice Questions directed at these four ministries:

Ministry of Road Transport and Highways (MoRTH): accident data, black spots, highway safety schemes, motor vehicles legislation, and driving training infrastructure.

Ministry of Home Affairs (MHA): traffic police capacity, enforcement directives, inter-state coordination on road crime, and hit-and-run cases.

Ministry of Health and Family Welfare: trauma care infrastructure, golden hour response, ambulance availability, and hospital preparedness near accident-prone corridors.

Ministry of Housing and Urban Affairs (MoHUA): urban road design, city-level traffic management, pedestrian infrastructure, and Smart Cities Mission components related to road safety.

Identify and extract all questions related to the following themes:

Black spot identification and removal, accident mapping and iRAD implementation, challan issuance and conviction rates, drunk driving and overspeeding enforcement, helmet and seatbelt compliance, awareness campaign budgets and reach, driving training institute completion rates, e-challan and CCTV infrastructure, speed camera deployment, and emergency response time data.

For each question and its government response, record: session number and year, house, question type, ministry, and all numerical data cited such as fatality

counts, enforcement figures, fund allocations, and scheme progress. Every entry must have a source link. Do not include data you cannot verify with a citation.

2

Part 2: Quantitative Analysis

Perform the following analyses. Every trend you find represents a system gap, not an individual failure.

Year-on-year trend of road crash fatalities from 2015 to 2024 as cited in parliamentary answers. State-wise distribution of accidents, deaths, and injuries wherever comparative data appears. Enforcement gap analysis comparing challan issuance and fine collection against fatality trends. Scheme delivery analysis mapping budgets allocated versus expenditure versus physical progress for programs like iRAD, IDTRs, and black spot remediation. Parliament attention analysis identifying which issues were raised most frequently and which were raised but never followed up on.

Present findings through clear visualizations with titles, axis labels, and a one-line insight summary per chart.

Part 3: Five Recommendations for Traffic Police

Based strictly on what the data reveals, write five recommendations that traffic police authorities can act on. Each recommendation must include:

What the data shows: one specific quantitative finding from your dataset.

The system failure being addressed: why this is a structural problem, not an individual behaviour issue.

Recommended action: what traffic police should specifically do differently or implement.

Your five recommendations must collectively reflect Crashfree India's integrated approach across data, enforcement, design, behaviour, and technology.

Deliverables

1. **Master Dataset** (Google Sheets): all compiled parliamentary data with source links, structured and sorted by theme and year.
2. **Analysis Report** (PDF or Google Doc): trend summaries and charts with brief narrative. Insights over volume.
3. **Recommendations Document** (PDF or Google Doc): five recommendations written clearly enough to share directly with a state

traffic police chief or present in a policy meeting.

3

Data Sources

Primary: sansad.in, loksabha.nic.in, rajyasabha.nic.in

Secondary cross-reference only: MoRTH annual road accident reports, NCRB data, iRAD portal, WHO Global Road Safety Report

Submission Guidelines

- **Submit all the given tasks in a separate document** all to be uploaded in a common drive link - ensure that the folder link has view access before submitting.
- Orient your work logically showcasing a **clear flow of ideas more than decorative language or lengthy writing**. Prioritise to use headers, bullet points, or sections to make your documents easy to follow.
- **Focus on depth, not length** as a sharp, well-argued 2-pager is better than a vague 6-page report. Make sure each section delivers value and relevance.
- You are encouraged to use AI tools (including ChatGPT) to support your research or editing but **the thinking, analysis, and approach must be your own. AI is a supplement**, not a substitute for your original thinking.

Video Submission

Present your assignment overview In up to 3 minutes video: the idea, your approach, and what impact it could create. To keep it crisp we will review the detailed document separately. We're not expecting you to cover every detail, but **show us the strength of your thinking, structure, and approach**

You can record this on your phone or laptop. Keep it simple and clear, **we're evaluating clarity of thought, not video production quality**.

Highlighting the connection between the opportunity and road safety it addresses awareness, behavior, branding, marketing, or technology related to

4

safer roads.

How Your Assignment Will Be Evaluated

Each submission will be evaluated on the following parameters:

- Clarity of Concept & Alignment with brief
- Creativity and Originality in relation to CFI Approach
- Execution and Technical Proficiency
- Impact and Audience Relevance Created

Submit your detailed assignment (PDF/PPT) via this link:
